RE: Waukegan Harbor Remedial Action
Notice Semi-Annual Groundwater Sampling

VIA TELEFAX - 312/886-4071
(Original to Follow via Certified Mail)

Dear Mike:

Semi-annual groundwater monitoring will occur on October 27-28, 1997. The sampling will be completed using the procedures provided in the Quality Assurance Project Plan for Operations and Maintenance and the existing project equipment. Actual sampling of monitoring wells will begin after 9:00 a.m. because the sampling crew will first need to gather supplies and conduct field preparation activities (such as instrument calibrations). Water levels for the monitoring wells will also be measured. Generally, the sampling begins at Slip No. 3 and proceeds to the East and then the West Containment cell wells. The sequence may vary though because most equipment is dedicated to individual wells. The sampling will be performed by representatives from ATC and OMC. If US EPA or the Army Corps of Engineers (US ACOE) oversight staff wishes to observe any particular activities or wells, please let me know so we may coordinate schedules with you.

Sincerely,

Lisa A. Bongiovanni
Environmental Control Analyst
